Overview 2023/24

Outlook 2024

In the aftermath of the COVID-19 pandemic, Nepal faced a challenging credit crunch scenario in 2023. Despite these difficulties, there's a positive outlook on the horizon. The country's economic revival is underway, and although growth expectations dipped below historical averages, there's optimism for a robust recovery. The initial sense of pessimism is giving way to resilience and adaptability, with the potential for substantial economic progress.

While challenges persist, there's a concerted effort to overcome them. The consequences of the financial crisis are being addressed through strategic measures, fostering an environment conducive to investment, innovation, and overall economic development. The nation is on a trajectory to rebound from the setbacks experienced in the wake of the pandemic.

Despite the lingering effects on domestic demand, economic activities, and market confidence, there are positive signs of gradual improvement. Government revenue, including VAT collections, is expected to see an upturn as economic conditions stabilize. Although there are rising obligations related to social security and administrative payments, prudent financial management is being implemented to navigate these challenges successfully.

While economic analysts acknowledge the potential for continued economic headwinds, there's a prevailing belief that Nepal is well-positioned to weather these conditions. Strategic monetary and fiscal policies are being carefully considered to ensure stability and support the ongoing economic recovery. The nation's resilience and proactive measures instill confidence in a brighter economic future.

Increasing Momentum!

We are uplifted by the encouraging developments witnessed in recent months, particularly in the dynamic evolution of the economy. The data for November reveals a significant alleviation in economic activity, harmonizing seamlessly with forecasts for the Second quarter, indicating improvements more favorable for addressing inflation concerns and bolstering confidence. While core inflation experienced a decline in November, reaching yearly lows, the latest data suggests a gradual correction in the right direction.

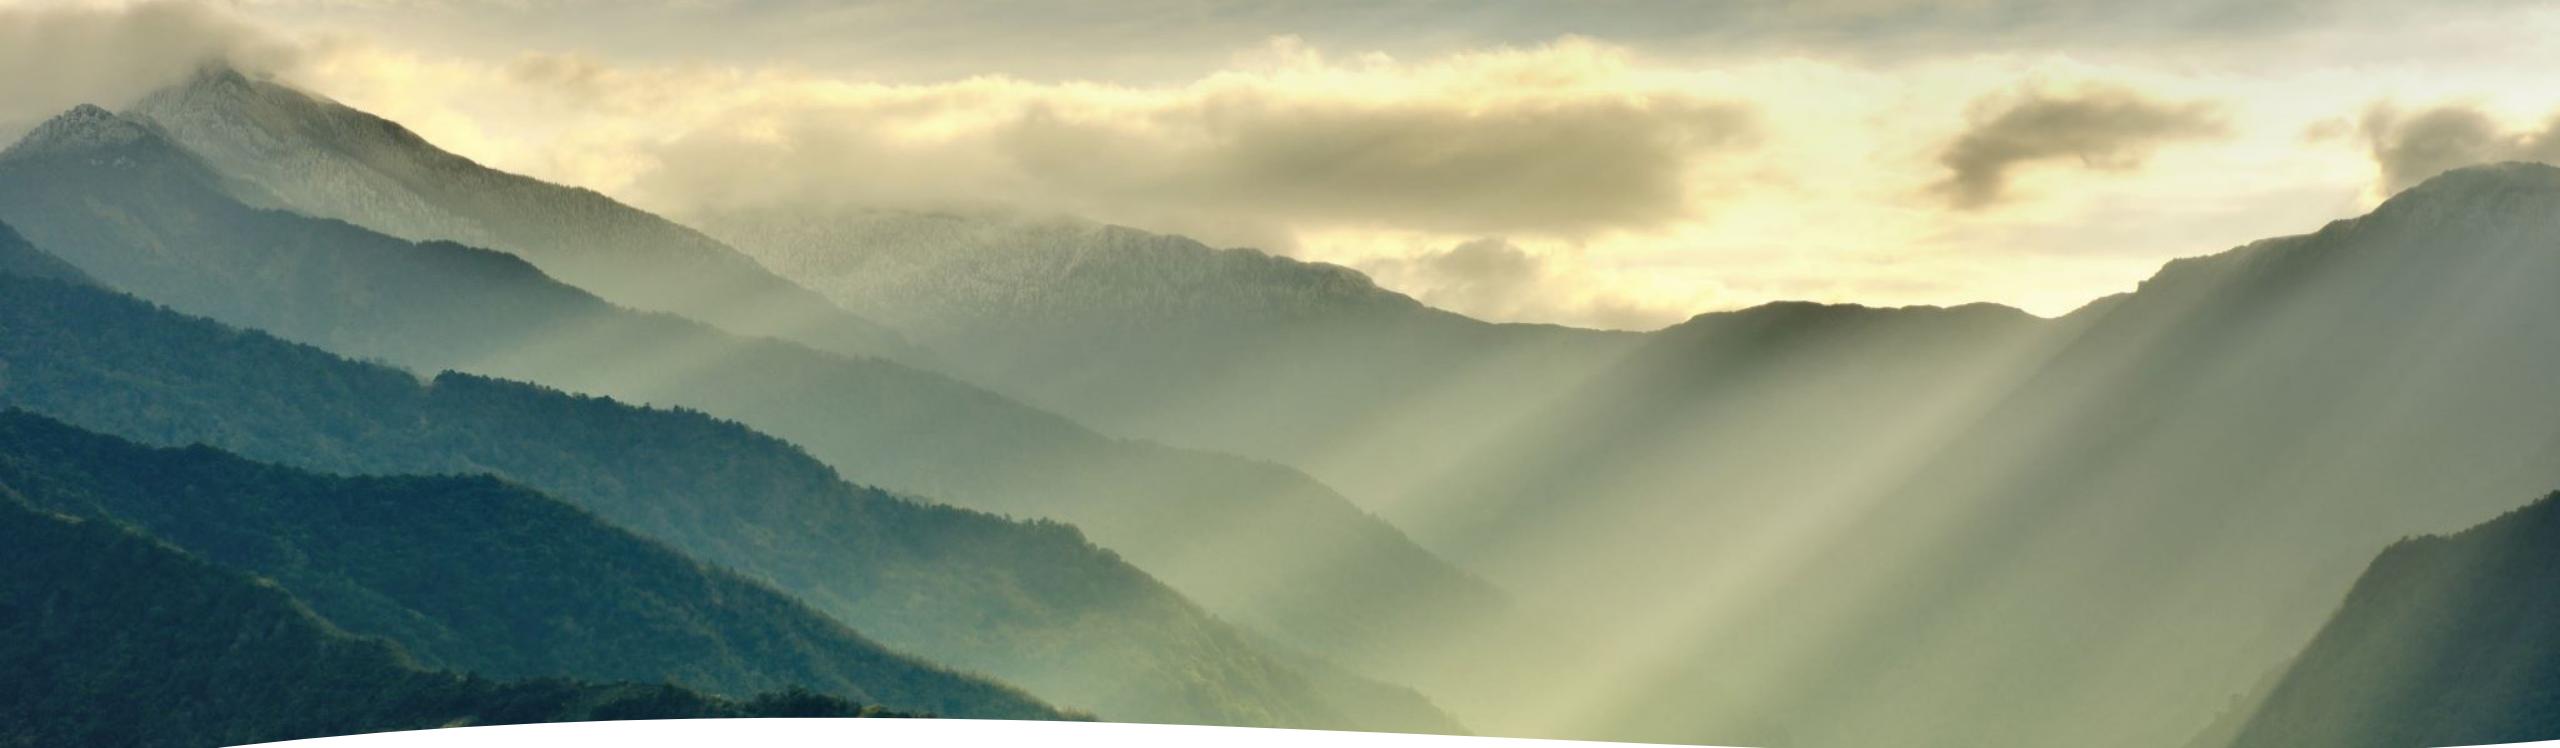

Our optimism is fueled by the early signs of economic moderation in the Second quarter, and the fact that inflation remains within moderate levels. Although it is too early to definitively assert the sustainability of the observed slowdown, our confidence is growing that current policies are well-positioned to foster economic recovery and achieve government growth objectives. Despite this positive outlook, uncertainty persists regarding the future pace of activity, making it challenging to conclusively state whether the actions taken by the Nepal Rastra Bank are sufficient to ensure price stability. We eagerly await the data in the coming months, anticipating valuable insights that will contribute to addressing this question optimistically.

2024 “Optimistic” Outlook

Financial stability risks have become a focal point in central banks' decision-making processes. This is driven by the realization that financial instability could hinder central banks from achieving their primary objectives. Moreover, it acknowledges that monetary policy, in isolation, may inadvertently introduce stress into the financial system.

For example, raising the policy rate to address inflationary pressures may bring existing financial vulnerabilities to the forefront, potentially leading to financial instability. The type of inflationary pressure prompting the tightening of monetary policy initially is a crucial factor in determining the extent to which a central bank can raise its policy rate without posing a threat to financial stability.

- *The economic data for November signals an improvement in consumer spending compared to the first quarter, marked by a rise in retail sales—a departure from the decline observed since January 2023. Notably, spending on motor vehicles, a sector sensitive to interest rates, has increased, suggesting a potential impact of the accommodative monetary policy implemented by the Nepal Rastra Bank (NRB).*
- *Fuel station expenditures are also on the rise, primarily due to a significant drop in oil prices and an uptick in the movement of products and services. The retail sector witnesses increased demand, reflecting a widespread enhancement in consumer demand. Furthermore, there are indications of positive developments in both manufacturing and non-manufacturing activities by businesses.*
- *While these trends are encouraging, they do not provide conclusive evidence of their continuity. Just a few months ago, both inflation and economic activity rebounded, introducing a degree of uncertainty about the future trajectory.*
- *The ongoing discussions about the overall relaxation of financial conditions this month, as evidenced by market interest rates and asset prices, are noteworthy. Although long-term interest rates remain above average, the general improvement in financial conditions is expected to support household and business spending. However, the recent easing of financial conditions serves as a reminder that numerous factors can influence these conditions, emphasizing the need for policymakers to exercise caution when relying on such measures to fulfill their responsibilities.*

Climate Change: Assessing Nepal's Role and Urgent Needs

Nepal, though not a contributor to climate change, grapples with its consequences. While our nation has made no significant contributions to climate-altering activities, we are feeling the impact acutely.

As we strive to protect our beautiful country of Nepal from the adverse effects of climate change, it's crucial that we encourage countries with significant emissions to recognize their role in this global challenge.

We must work together to ensure that Nepal receives its fair share of assistance for effective climate protection..

Strategic Measures for Economic Recovery and Stimulus Initiatives in Nepal

Strategic Path for Economic Recovery

The Government of Nepal is urged to articulate a comprehensive strategy for economic recovery, incorporating the following measures:

3. Embrace the "New Economy"
Identify and capitalize on opportunities within the "new economy," focusing on financial services, digital technology, telecommunications, and other sectors less reliant on physical presence.

4. Enhance Competitiveness
Evaluate the ease of doing business, aligning with international standards to enhance competitiveness.

1. Foundational Concepts for Inclusive Revival

Develop and prioritize foundational concepts to ensure an inclusive economic revival.

2. Sectoral Adaptation and Support

Anticipate and address challenges in vital economic sectors through strategic support, encompassing agriculture, manufacturing, retail, hospitality, construction, and related industries.

6. Stakeholder Engagement
Promote active engagement with stakeholders, including businesses, employee representatives, and other bodies.

7. Tailored Initiatives

Create, develop, and assess actionable initiatives tailored to specific sectors (e.g., hospitality, Agri, and technology) and overarching themes (e.g., productivity).

8. Data Enhancement

Scrutinize existing data sources and explore innovative metrics to improve decision-making.

9. Performance Framework

Contemplate a new delivery and performance framework for reporting key economic achievements.

Stimulus Initiatives

These recommendations are crucial for steering Nepal towards economic recovery and sustainable growth.

1

Stimulating Business Activity

- Support private sector growth and encourage investment promotion.

2

Agro-Industrialization

- Promote agro-industrialization to address challenges in agriculture, including low production, inadequate post-harvest handling, limited value addition, and insufficient market access.

3

Infrastructure Development

- Invest in essential infrastructure for economic growth, focusing on transportation and power infrastructure.

4

Credit Access for MSMEs

- Implement a scheme to reduce lending risk for micro, small, and medium enterprises (MSMEs), making it more appealing for financial institutions to lend to this subsector.

5

Tax Reform

- Harmonize, abolish, and reduce tax rates to improve the business and investment environment.
- Amend fees and levies imposed by regulatory authorities and departments.
- Strengthen tax law enforcement to address evasion challenges and minimize revenue leakages.

6

Effective Public Expenditure

- Maintain fiscal discipline and increase the efficiency of public funds.
- Allocate funds to priority areas stimulating economic growth.
- Prioritize ongoing projects over committing to new ones.

Charting a New Course for Reform

Financial Sector Reform Objectives:

The primary goals of financial sector reform should encompass averting credit crunches and banking crises while emphasizing effective management should such crises occur. Additionally, these reforms must prioritize support for low-income earners. Prudential regulation and supervision should address not only microeconomic but also macroeconomic risks associated with boom-bust cycles.

Asset Management Company (AMC):

Given the escalating levels of non-performing assets (NPAs) and the potential for corporate defaults to trigger economic downturns and unemployment, the opportune moment has arrived to initiate the establishment of an Asset Management Company (AMC). Establishing an AMC to handle the bad loans of Banking and Financial Institutions (BFIs) can strategically address NPAs and enhance the financial health of the banking sector. The creation of an NPA management AMC is a pivotal step in addressing challenges posed by bad loans, benefiting BFIs by improving financial health and contributing to overall economic stability and growth. I wholeheartedly endorse the establishment of such an institution and believe it can be a game-changer in addressing NPA-related issues in the financial industry.

Amendment to the NRB Act:

Amending the NRB Act should heavily emphasize a comprehensive evaluation of the NRB Board's composition. The current composition, predominantly comprising retired NRB employees, should undergo restructuring to include experts from diverse economic and professional backgrounds. However, careful consideration of specific qualifications and selection criteria for these external experts is crucial to ensure they possess the necessary skills and knowledge to contribute effectively to the central bank's functions. Additionally, the governance structure should strike a balance between external expertise and the central bank's internal knowledge and experience.

Establishment of a Monetary Policy Committee:

The establishment of a Monetary Policy Committee is imperative to ensure both independence and accountability in the policymaking process. While separating the roles of monetary policy and credit policy can offer advantages, emphasizing the significance of coordination and communication among responsible authorities is essential. These factors are vital for safeguarding overall economic stability and the health of the financial system.

Charting a New Course for Reform

BAFIA Amendment:

The BAFIA (Banking and Financial Institutions Act) requires amendments that incorporate provisions for an exit mechanism for BFI promoters. Encouraging a significant public holding will elevate governance standards within these institutions. Additionally, a reevaluation of the Board's composition is recommended, introducing a blend of executive and non-executive directors to enhance governance. Furthermore, restructuring BFIs based on their functions, rather than solely on capital, will promote efficiency and relevance in the financial sector.

GDP Base Review:

The Government of Nepal should contemplate updating the base year for GDP calculation from 2010/11 to 2020/21. This adjustment is warranted due to four significant events post the Great Gorkha Earthquake: a trade embargo, changes in government structure, and the impact of the Covid-19 pandemic. Shifting the base year to 2020/21 will provide a fresh perspective for policy formulation and response, considering the evolving economic landscape.

Prompt Corrective Action:

In addition to existing PCA guidelines, the NRB should consider supplementary provisions. If the net NPA level is below 7%, no further action is required. If it exceeds 7% but remains below 9%, falling under the first threshold, BFIs should abstain from approving new loans. Crossing the 9% threshold triggers the second tier, requiring BFIs to refrain from accepting new deposits. If this metric reaches 11% or higher, the bank will be classified into the third grade, and PCA initiation will follow. Additionally, in relation to the Income Tax Act, permissible provisions charged to the Profit and Loss statement (P&L) should be raised from 5% to 9%.

Nine Enablers of Nepalese Economy

As capital expenditure is crucial for achieving growth objectives in the Federal Structure Economy, Nepal should focus on following basic principles:-

- Design Long-term vision and strategy for economic development and social harmony,
- Prepare Project Banks - investment project preparation to invite local as well as foreign investment,
- Reduce Budgetary processes to speed up capital expenditure,
- Improve Procurement Efficiency and maintain budgetary discipline,
- Implement Stringent Contact Management and enforcement requirements to maintain time schedule of the project.
- Design an Effective Monitoring system to improve the productivity of investment,
- Appoint Competent Project Personnel led by dynamic person,
- Support effective Legal Institutional Framework for PPP investment and introduce fund base investment approval process.
- Enabling sectoral policy Operation Framework

The government of Nepal must plan effectively and effectively and should continuously monitor its activities to achieve sustainable goals and high growth.

Economic Information

2

Anticipated Inflation

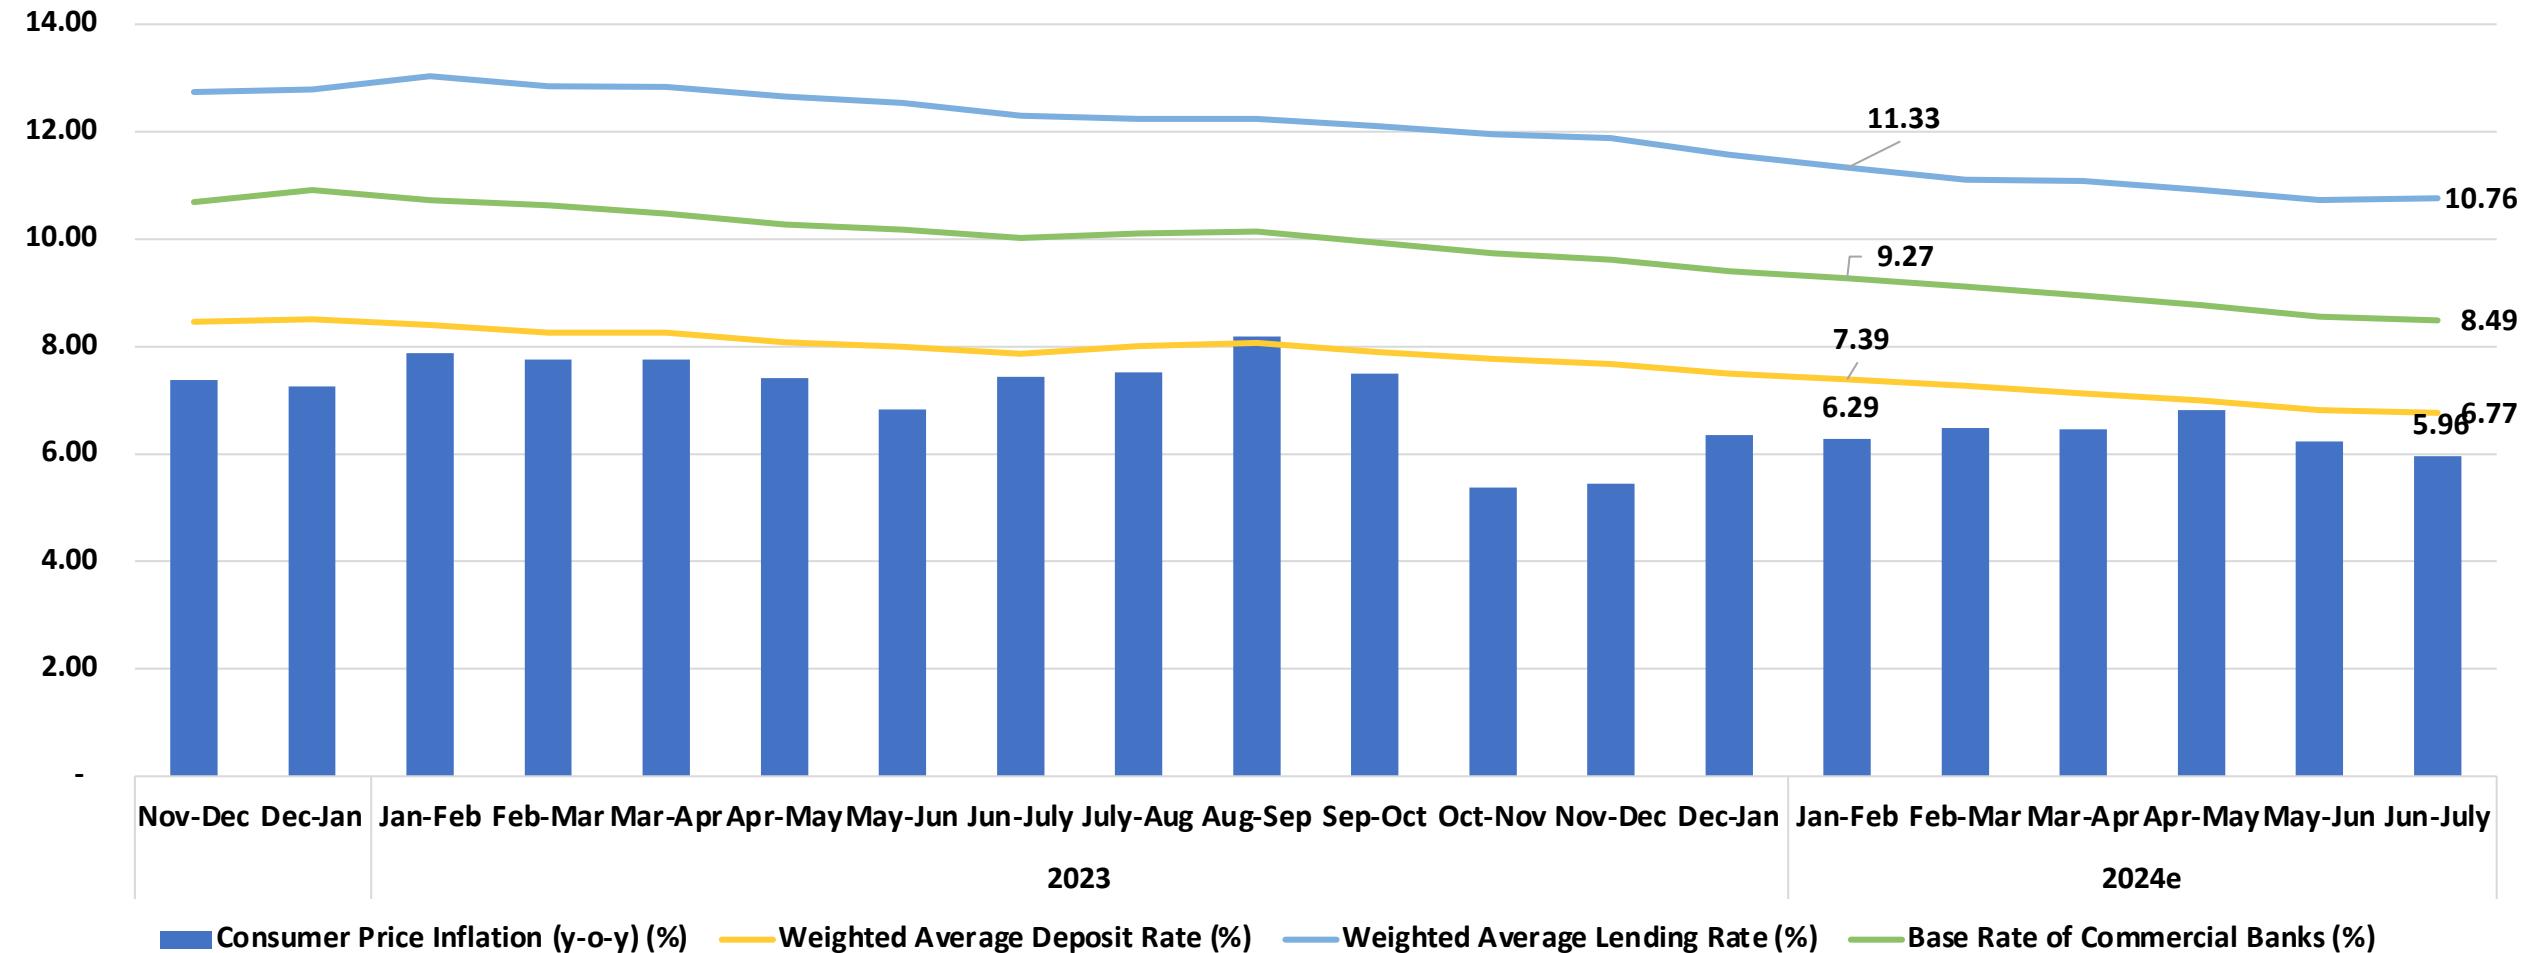

Amid the backdrop of global uncertainties, it is crucial for the Nepal Rastra Bank (NRB) to consider an alternative strategy that recognizes the potential misalignment between inflation control and financial stability objectives.

In the current environment, prioritizing financial stability suggests that the NRB should focus on maintaining a target inflation rate with an acceptable margin of 2% on either side. Additionally, implementing supplementary prudential regulations can act as a supportive measure to strengthen overall financial stability.

Imports surges during OCT. 2023							
	Description	Surge in Quantity	Surge in Amount	Surge Amount USD Million	Share in Incremental imports	The Potential for BOP Overall Reversal Risk	Root of the incremental imports
Trade to GDP	As a positive sign of improved resilience in the external sector, the Department of Customs announced that the year-on-year trade deficit as a percentage of gross domestic product (GDP) saw a slight uptick to 29.45% by mid-November 2023, compared to the 29.10% reported in the previous month.						
Trade Deficit	In the fifth month of fiscal year 2023/24, the trade deficit showed positive growth, reaching \$0.90 billion, which marked a notable increase from the previous month's deficit of \$0.72 billion. In a year-on-year comparison, the trade deficit for the same period in FY 2023/24 decreased to \$11.05 billion, demonstrating an improvement from the \$12.74 billion recorded in the corresponding period of the previous fiscal year.						
Import Pressure	Heavy reliance on imported raw materials, capital goods, and consumer products. Limited potential for export growth. Sending unskilled manpower abroad as a primary export. Limited international transportation connectivity. Untapped natural resources.						
Observations	<p><i>Presently, Nepal enjoys robust foreign exchange reserves, providing coverage for over 12.51 months of imports and service payments when considering the year-on-year import ratio. Encouragingly, the Nepalese economy faces no significant challenges, thanks to the decreasing prices of imported energy and food.</i></p> <p><i>Despite the shift in monetary policy from tightening to accommodative, there hasn't been a pronounced improvement in aggregate demand. However, there's optimism surrounding the expectation of continued growth in remittance inflows, offering relief to the balance of payments in the months ahead.</i></p> <p><i>While there has been a noticeable increase in the import of specific goods in the current month, the risk of a significant reversal in this trend has not seen a substantial escalation, contributing to overall stability.</i></p>

Import Capacity in Months and Lending Rate!

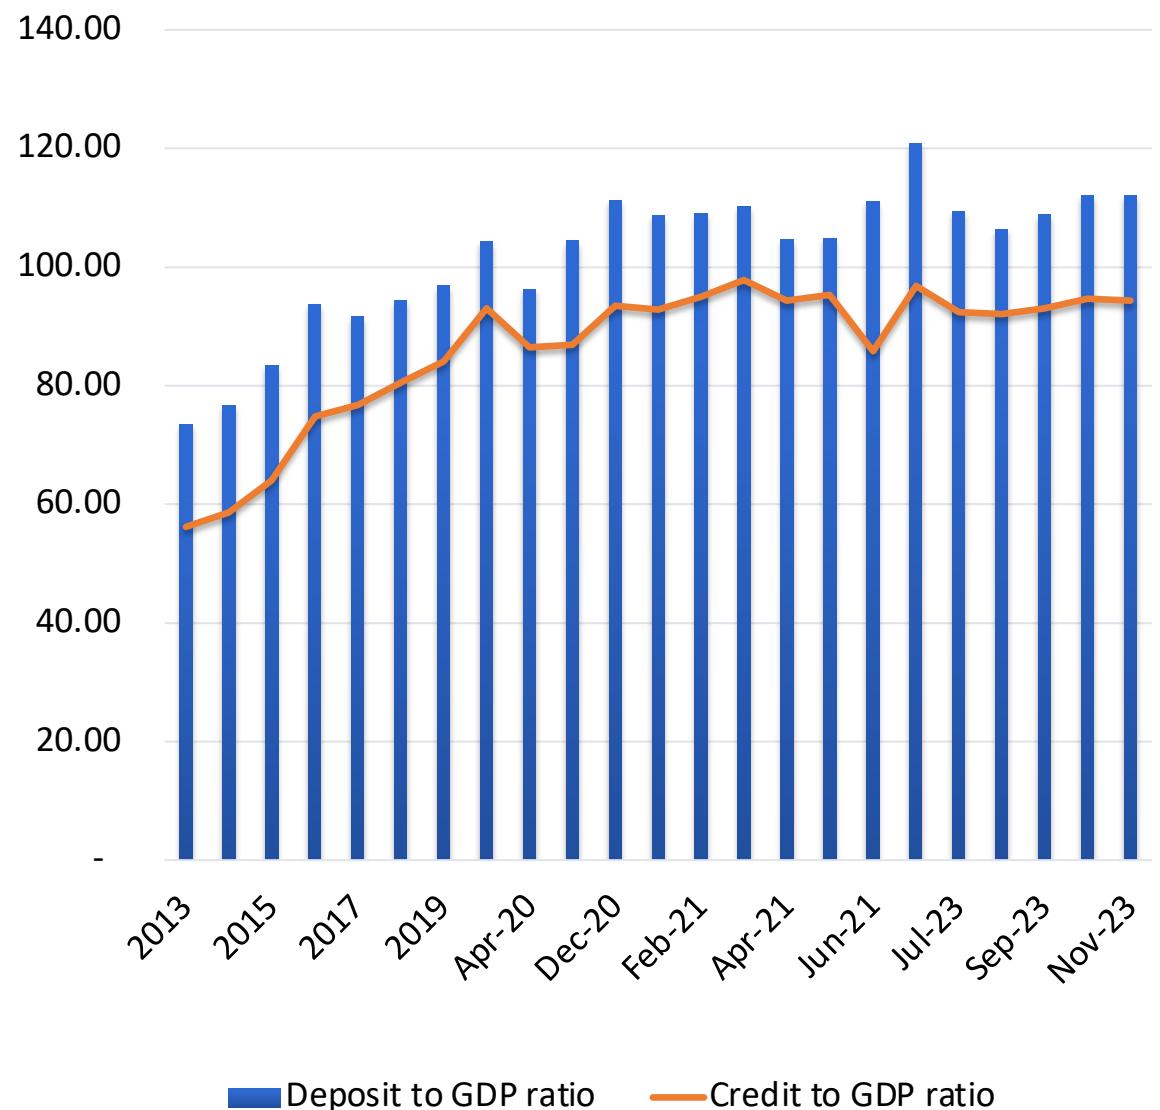

GDP and BFI's Risk Assets and Liabilities!

Government of Nepal must shift base year of GDP calculation 2010/11 to 2020/21 as four major event occurred after 2011 namely:

- Great Gorkha Earthquake
- Trade embargo
- Government structure
- Covid-19.

Shifting of the base year will sufficiently provide new horizon for policy design and response.

Economic Performance

Real Sector		Outlook																					
Corporate performance		<p>Following the accommodative stance adopted by the NRB, there is a promising outlook for a substantial decrease in the population of MSMEs experiencing negative economic profitability. This positive trend is likely to contribute to a reduction in default rates. Additionally, a considerable portion of large corporations has witnessed notable enhancements in the return on invested capital (ROIC), accompanied by a rapid decline in the weighted average cost of capital (WACC). As a result, there is a lessened pressure on sustaining a favorable ROIC for these corporations.</p>																					
Working Capital financing		<p>Under the newly introduced guidelines, borrowers may encounter ongoing challenges when attempting to infuse new equity into their operations. The extension of the working capital cycle will hinder borrowers' ability to fund their working capital needs from internal funds. This elongation of the working capital cycle will make it impractical to inject fresh equity, as internal resources will be insufficient. Consequently, the implementation of these new working capital regulations is expected to have a detrimental effect, potentially impacting industrial growth and disrupting the balance in supply chain management.</p> <p>Sector-specific adjustments are still pending.</p>																					
Household debt		<p>Despite the corporate sector shouldering a significant portion of the debt burden, there is a positive aspect to note as household debt has experienced a substantial increase, nearing levels observed in advanced economies.</p>																					
Financial Sector	Outlook																						
Banking system	<p>The outlook for enhanced profitability in BFIs is promising, primarily attributed to the positive effects stemming from the availability of loan reconstruction and rescheduling facilities. Despite the imposition of additional taxes and challenges associated with a low-interest margin environment and constraints on non-interest income, the sector is expected to experience an improvement in profitability, particularly with the reduction in Non-Performing Assets (NPA). As of now, the NPLs and Loan Loss Provisions (LLP) of BFIs stand at \$1.40 billion and \$1.47 billion, respectively.</p>																						
Non-performing assets	<p>NPLs are expected to hover around the 3% mark by the end of July 2024. Nevertheless, uncertainty is likely to have a significant impact on bank capitalization levels and profitability, with potential ripple effects extending to other areas.</p>																						
Lending Growth	<p>Giving precedence to reducing corporate sector indebtedness and limiting the growth of household debt is crucial, although it is anticipated to present challenges to overall economic activity</p>

Major Risks/Impact	High	Medium	Low	Remarks
Excessive capacity, supply constraints, and intense competition within the manufacturing sector could potentially have adverse repercussions on asset quality.		✓		Improve
Substantial surges in the market prices of vital raw materials, energy, or transportation, along with supply disruptions, may negatively impact the performance of the industrial sector. This, in turn, could intensify the pressure on short-term loan demand and exacerbate financing mismatches due to working capital guidelines.		✓		Improve
A heavy reliance on imported raw materials, capital goods, and consumer products can potentially strain the Balance of Payments. Additionally, a supply-demand mismatch could lead to a deterioration in the asset quality of Banking and Financial Institutions (BFIs).	✓			No-change
Variations in the current market interest rates applicable to loans and debts, both within the financial market and the overall financing landscape, have the potential to negatively impact business operations and financial health, leading to a decline in asset quality. With credit growth remaining subdued due to sluggish domestic demand, it is expected that many market lending rates will be adjusted downward. This could also lead to a reduction in yields on government securities.			✓	Improve
The profitability of the banking sector continues to face challenges, including a low-interest margin environment, limitations on non-interest income, and a rising trend in corporate payment defaults. These factors pose challenges to the successful implementation of NFRS 9.	✓			No-change
The asset quality of Banking and Financial Institutions (BFIs) may experience a decline due to microeconomic vulnerabilities. Additionally, there is a potential for a significant increase in Income Tax liabilities in the event of changes to tax laws and regulations or unfavorable interpretations and inconsistent enforcement, particularly in transactions involving bargain pricing, share premiums, FPOs, and ownership transfers, among other factors.		✓		(BFI paid \$ 92 million in taxes for the FPO bargain pricing)
Variations in the exchange rate between the Nepalese Rupee and the U.S. dollar have the potential to influence the market prices of raw materials.		✓		Improve
Global supply constraints have the potential to negatively impact both operations and financial stability. An inability to effectively manage supply and distribution gaps could disrupt economic activities.		✓		No-change

Risk Matrix

	Condition	Related effect	Risk	
Low saving/Investment	Improving wholesale and retail operations.	Aggregate demand	Increase	Moderate
	Enhancing foreign exchange reserves and experiencing a substantial inflow of remittances	Pressure on BOP	Decline	Low
	Corporate cash recovery.	Firm Investment	Improve	Moderate
	Improve disposable income.	Consumer spending	Improve	Moderate
Post-Covid	Increasing Tourism activities	Occupancy at Hotel and retail restaurant	Increase	Low
	Outmigration	Demand for worker	Increase	Low
War and conflicts	Increasing commodities prices	Import Bill	Increase	Moderate
	Increasing Energy Price	Cost of production	Increase	Moderate
Interest Rate Outlook	Pressure on Liquidity	improvement of consumer's demand	Increase	Moderate
FDI inflow Outlook	Demand for liquidity in host countries	Flow of FDI	Low	High
Level of NPL	Reconstruction and rescheduling	Reduce NPL	Decline	Moderate
Demand for Working capital	Decreasing cost of borrowing and inputs	Reducing cost of production	Stable	Moderate
Inflation outlook	Lower commodity price	Lower consumer demand	Decline	Moderate

Way forward

	SPECIFIC MEASURES/WORKABILITY	TIME FRAME	IMPLEMENTABILITY	PRIORITY ORDER
Risk Assets management	The third review of the working capital guidelines should incorporate sector-specific requirements, given that the second amendment does not adequately address them.	Immediate	Possible	High
	Downward revision of policy rates and continuation of Refinancing for another one year	Immediate	Possible	Medium
	Allow assets purchase and allow Peer-to-peer lending and invoice discounting	Immediate	Possible	High
	Review Risk Assets pricing policy	Immediate	Possible	High
	Design and implement a second-phase recovery and stimulus package for agriculture, industries and services	Immediate	Possible	High
	Review base rate calculation method to include all costs	Immediate	Possible	Medium
	Implement mandatory taking Permanent Account Number (PAN) for all size loan.	Immediate	Possible	Medium
Liquidity Management	Replace CD ratio by Net-Liquidity Ratios	Immediate	Possible	High
	Review of Saving Deposit rate policy	Immediate	Possible	High
	Review of SLF policy, and Assets purchase policy of NRB	Immediate	Possible	High
	Discourage cash transactions and promote electronic payment system by focusing on digitization & Fin-tech and reducing the cost of transactions	Immediate	Possible	High

Way forward

	Specific measures/Workability	Timeframe	Implementability	Priority order
Legal reform	Consider revising BAFIA (Banking and Financial Institutions Act) to bolster State-Owned Banks (SOBs) and enhance their financial health. This can be achieved through either injecting fresh capital or through consolidation or acquisition of select private banks, thereby increasing their balance sheet size to a minimum of \$5 billion to attract foreign institutional investors.	Immediate	Possible	High
	Establish an exit policy aimed at balancing the ownership structure to enhance transparency and governance.	Medium-term	Possible	Medium
	Implement separate policies to supervise systematically important banks.	Medium-term	Possible	High
MSMEs	Initiate steps to have single definition of MSMEs across all regulators. Increase coverage of credit guarantees on MSME loans.	Immediate	Possible	High
	Introduce policy to scale-up agriculture base MSMEs, which can immediately create employment and substitute imports	Immediate	Possible	High
	Introduce E-commerce and digital solutions to increase access short-term bridge loans to micro and small businesses, and digital payments.	Short-term	Possible	High
Risk Assets	Initiate a sector-specific analysis and take proactive measures to conduct a swift assessment of Banking and Financial Institutions (BFIs) in order to comprehend the long-term implications of the ongoing crisis.	Short-term	Possible	High
Forex	Sustain the credibility of the exchange rate peg by periodically reviewing foreign exchange policies and directives.	Long-term	Possible	High

BANKING SECTOR OUTLOOK FY 2022/23 & 2023/24 (\$ IN MILLION)

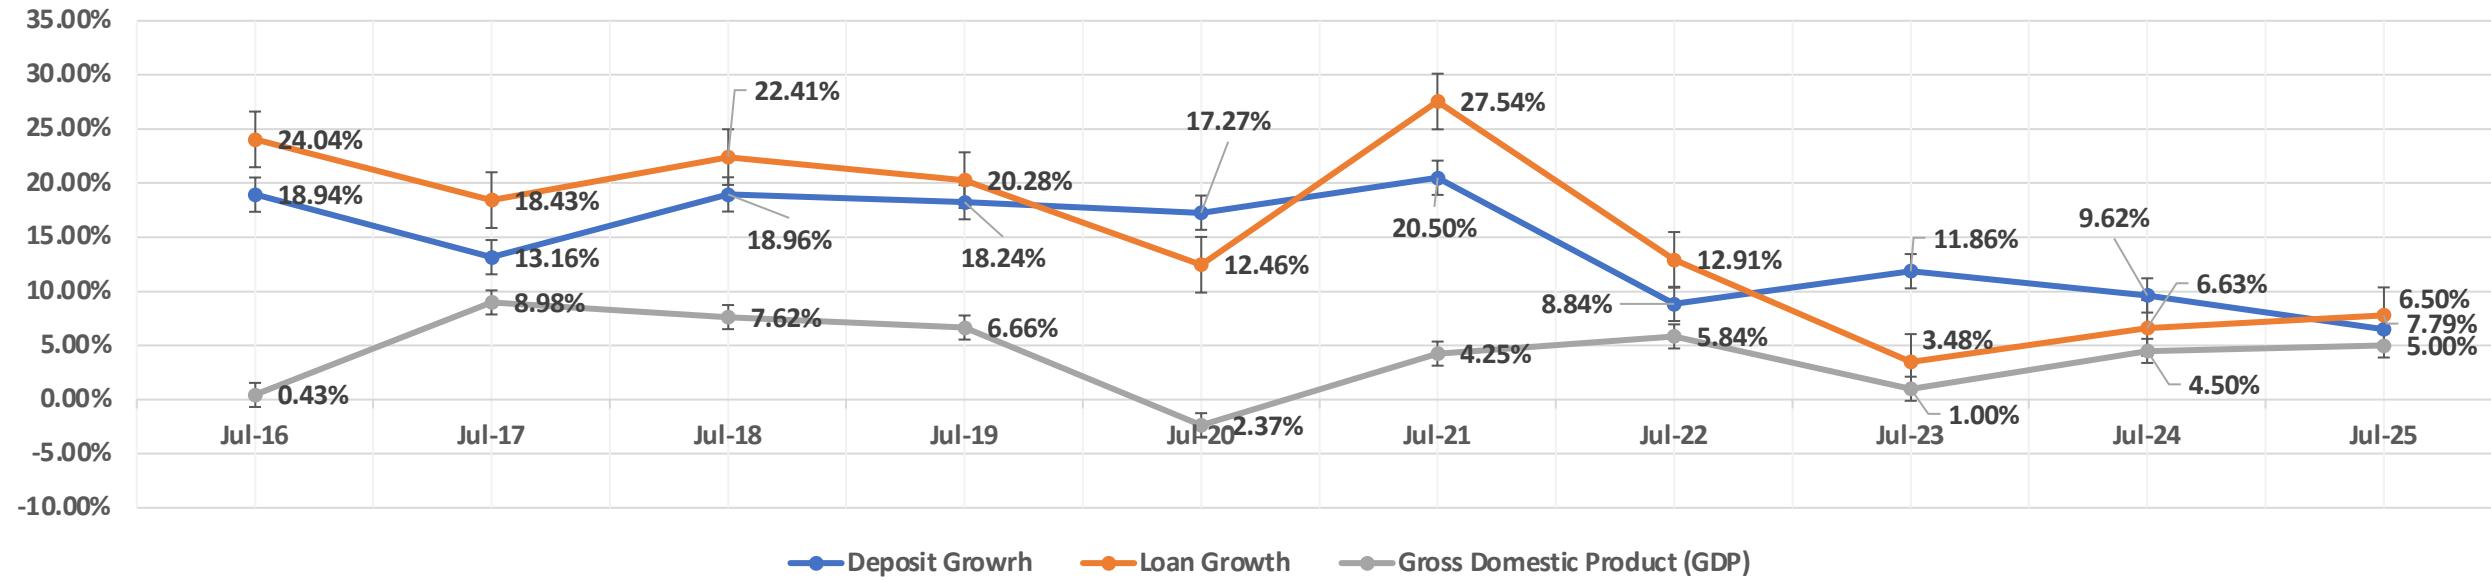

The tax associated with Bargain gain and FPO is anticipated to strain the already stressed capital of financial institutions, resulting in an expected reduction of Rs 60 billion or more in their lending capacity.

The question arises: should the tax payment related to bargain gains and FPO be treated as an expense on the profit and loss statement, or should it be deducted from reserves? Nonetheless, three alternative strategies are available:

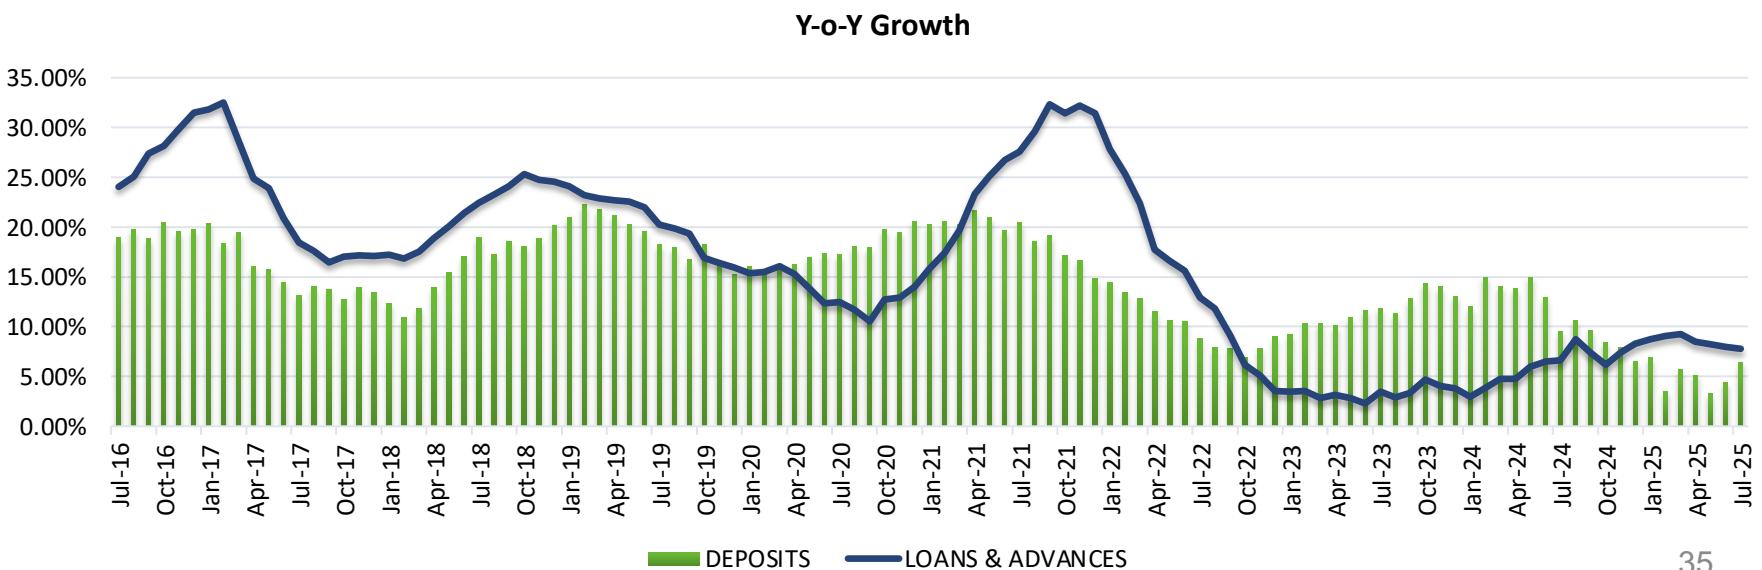

1. NRB could explore allocating it to a reserve, particularly since the capital movement is not a result of regular business operations. Clear directives should be rolled out, accompanied by measures to mitigate the impact on lending capacity (or on CAR). Importantly, this option would have no bearing on the profit and loss statement.
2. If NRB chooses to charge it to the profit and loss statement, it should allow BFIs to spread the impact over five years. This strategic move aims to protect both lending capacity and profitability. NRB should coordinate with the Accounting Standards Board and ICAN.
3. Alternatively, BFIs might be permitted to reduce capital on a pro-rata basis. It needs a lot of regulatory reform.

The prudent approach would be to charge it to reserves. In this scenario, prompt decision-making is imperative to ensure effective financial and fiscal stability.

Observations:

1. The global unrest and the surge in commodity prices are poised to negatively impact government revenue receipts. Consequently, achieving the revenue growth target of 9.18% appears to be a formidable challenge.
2. The endeavor to mobilize \$1,611 million in foreign loans appears ambitious. Furthermore, the acquisition of emergency financial assistance from multilateral agencies and securing other loans hinges on the progress achieved in various projects. Hence, it is imperative to enhance the capacity to absorb capital budget allocations effectively.
3. Domestic borrowing totaling \$1,818 million, combined with limited liquidity in bonds and unexpected tax burdens associated with M&A transactions and tax issues related to FPOs, may exert pressure on Banking and Financial Institutions (BFIs). This pressure could potentially dissuade BFIs from extending credit to the private sector.
4. The target of mobilizing \$375 million in foreign grants surpasses the grants received in recent years.
5. Approximately 22.84% of the budget, equivalent to \$3,031 million, has been allocated to provincial and local governments. This allocation reflects a 1.12% decrease compared to the previous year. Nevertheless, the government aims to empower sub-national governments to assume a more substantial role in national priority projects.
6. Certain sections of the Finance Act have retroactively imposed taxes, necessitating explanatory notes to elucidate these clauses.
